

## CONTENTS    Vol. 3

	Reading planning . . . . .	pag. 6
Lect. n. 111 :	Vectorial algebra ** . . . . .	8
Lect. n. 112 :	Gauss's law . . . . .	14
Lect. n. 113 :	Continuity equation . . . . .	17
Lect. n. 114 :	Maxwell's field equations. *    Significance of Maxwell's field equations . . . . .	20
Lect. n. 115 :	Galileo's transformations and inertial systems . . .	26
Lect. n. 116 :	Light velocity is constant . . . . .	30
Lect. n. 117 :	Lorentz's transformations . . . . .	34
Lect. n. 118 :	Length contraction and time dilatation. Einstein's equivalence principle . . . . .	42
Lect. n. 119 :	Relativistic transformation of the velocity . . .	44
Lect. n. 120 :	Some characteristic of Lorentz's transformations * .	46
Lect. n. 121 :	Maintenance of the physical laws, changing frame of reference . . . . .	56
Lect. n. 122 :	Momentum and energy in the classical mechanics .	60
Lect. n. 123 :	Relativistic momentum and energy . . . . .	62
Lect. n. 124 :	The Lorentz invariance of Maxwell's equations . .	66
Lect. n. 125 :	Four dimensional vector charge-current * . . . .	68
Lect. n. 126 :	Four dimensional vector potential $\underline{\Phi}$ * . . . . .	70
Lect. n. 127 :	Electric and magnetic field wave equations * . .	75
Lect. n. 128 :	Monochromatic flat wave * . . . . .	78
Lect. n. 129 :	Electromagnetic field matrix ** . . . . .	83

Lect. n. 130 :	Classical Physics crisis. The energy quantum hypothesis . . . . .	88
Lect. n. 131 :	Electronvolt . . . . .	94
Lect. n. 132 :	Photoelectric effect . . . . .	96
Lect. n. 133 :	Compton's effect . . . . .	104
Lect. n. 134 :	Light double nature. Matter wave-motion side . . . . .	114
Lect. n. 135 :	The nucleus . . . . .	118
Lect. n. 136 :	Radioactivity Mean life Radioactivity applications Radioactivity and the human body . . . . .	122
Lect. n. 137 :	Particles detectors . . . . .	130
Lect. n. 138 :	Bond energy . . . . .	132
Lect. n. 139 :	Nuclear reactions : fission and melting . . . . .	136
Lect. n. 140 :	Elementary particles and the forces . . . . .	140
Lect. n. 141 :	Particles classification . . . . .	146
Lect. n. 142 :	Quarks . . . . .	149
Lect. n. 143 :	Standard model and Higgs's Boson . . . . .	152
Lect. n. 144 :	The Cosmos . . . . .	154
Index . . . . .		158

\* *The reader could disregard this Lection, in his first reading*

\*\* *The lecture of this Lection is connected with a more intensive study of all the arguments of this book*
